

WEBSITE STRATEGY & INFORMATION ARCHITECTURE

Jagruti Appliances Website Plan

A premium, SEO-driven, conversion-optimised website blueprint — built as a product catalogue and WhatsApp-first sales funnel, not a traditional e-commerce checkout.

"Don't try to make the website complete the transaction. Make the website complete the buying decision."

DOMESTIC & COMMERCIAL FLOUR MILLS • PULVERIZERS • FOOD PROCESSING MACHINERY • ROTI MAKERS

Prepared for: Jagruti Appliances, Rajkot, Gujarat

Document type: Website Plan & Sitemap

Date: August 2026

1. Project Overview & Core Strategy

Jagruti Appliances should be positioned as a **premium product-commerce website** — not a traditional corporate manufacturing site. It should look and feel like modern e-commerce while using **WhatsApp as the actual conversion and sales channel**, since there is no online payment, login, cart or checkout involved.

The Core Model

Google / Instagram / YouTube → SEO Landing Page / Blog → Product Category → Product Detail →
Compare / Proof → "Get Price on WhatsApp" → Sales Team → Sale

This is best summarised as: **Premium E-commerce Experience + SEO Product Catalogue + WhatsApp-led Sales**. The website's job is to get a visitor to a confident buying decision — WhatsApp and the sales team take it from there.

Primary & Secondary Conversions

Primary Conversion

Get Price on WhatsApp — present on every product page, category page and the sticky mobile bar.

Secondary Conversions

Ask About This Product • Request a Callback • Download Brochure • Talk to an Expert • Find the Right Machine

Why This Approach, Not a Standard Online Store

Deliberately excluded

- Login / customer accounts
- Registration
- Shopping cart
- Online payment gateway
- Checkout flow
- Online order management

Built instead

- Full product catalogue with search & filters
- Product comparison tool
- Rich product gallery & specifications
- Reviews and FAQs
- "Get Price" / "Enquire Now" everywhere
- Brochure download, service & support, map/ location

Starting point The existing Jagruti Appliances website already has meaningful SEO assets worth preserving and upgrading rather than discarding: category content such as Domestic Atta Chakki, individual product pages (e.g. Aura Plus), blog articles targeting terms like "best flour mill for home", and an established product range — Supreme, Supreme Plus, Kerona, Kerona Plus, Aura, Aura Plus, Premium, Premium Plus and Gelanto. The new site restructures this into a stronger product-led, SEO + conversion architecture.

Every current and future machine gets its own indexable URL under `/products/[model-name]/`. If Jagruti's commercial or food-processing range includes more machines than the nine domestic models above, each one adds one more page to this structure.

3. Home Page — Section by Section

The homepage sells the brand and routes visitors quickly toward the right product category; category and product pages carry the SEO weight.

Section 1 — Hero

H1: "Premium Flour Mills & Food Processing Machines for Modern India"

Supporting copy: Engineered for reliable performance, easy operation and everyday convenience.

Explore Jagruti's domestic and commercial food-processing solutions.

Buttons: Explore Products / Get Expert Advice → WhatsApp

Visual: large premium product render/photo with subtle motion, sky-blue + white brand environment.

Section 2 — Trust Bar

Since 1995 • ISO 9001:2015 • Indian Manufacturer • Domestic & Commercial Solutions

Section 3 — Shop By Need

Buying-intent paths rather than a plain "Products" link, since visitors often don't know the exact model they want:

Need	Routes To
My Home	Domestic Flour Mills
My Business	Commercial Flour Mills
Food Processing	Pulverizers & Processing Machinery
Making Rotis	Roti Maker Machines

Section 4 — Featured Products

E-commerce-style cards: product image, name, one-line description, key spec, model, "View Product" and "Get Price on WhatsApp." Example: *Aura Plus — Premium Domestic Flour Mill — 6.5 Kg Model.*

Section 5 — Why Jagruti

30+ Years of Manufacturing • Quality-Focused Engineering • Designed for Indian Kitchens • Advanced Technology • Reliable Performance • After-Sales Support • Wide Product Range • Custom Manufacturing Capability.

Section 6 — Product Experience ("From Grain to Fresh Flour")

A short visual/video sequence: Add grains → Select your setting → Start grinding → Enjoy fresh flour — demonstrating the experience rather than only listing specs.

Section 7 — Domestic vs. Commercial Split

"For Your Home" vs. "For Your Business" — two clear visual paths, CTA: Find Your Machine →

Section 8 — Customer Reviews

Premium testimonial cards (name, location, product, rating, review). If genuine reviews aren't available at launch, leave the section built and empty rather than fabricating reviews.

Section 9 — Service & Support

Product Support, Warranty, Spare Parts, Service Assistance, Installation, Maintenance — CTA: Get Support →

Section 10 — Social Proof (Instagram / YouTube)

"See Jagruti in Action" — product videos, manufacturing footage, demonstrations, customer usage, recipe/kitchen content.

Section 11 — Final CTA

Large closing band: "Find the right Jagruti machine for you." — Explore Products / Talk to an Expert on WhatsApp.

4. Product Category Pages

This is where SEO becomes serious — each category is its own landing page, not a filtered view of / products/.

Category Page	URL	Primary Keyword Targets
Domestic Flour Mills	/domestic-flour-mill/	atta chakki, domestic atta chakki, flour mill for home, best atta chakki for home
Commercial Flour Mills	/commercial-flour-mill/	commercial flour mill, commercial atta chakki, flour mill machine for business
Pulverizer Machines	/pulverizer/	pulverizer machine, food pulverizer, pulverizer manufacturer in India
Food Processing Machinery	/food-processing-machinery/	food processing machinery, food processing equipment India
Roti Maker Machines	/roti-maker-machine/	roti maker machine, automatic roti maker, commercial roti maker

Standard Category Page Structure

Hero (H1 + intro) → Who it's for / benefits / features → Product Collection grid → Why Choose Jagruti (feature comparison) → How to Choose a Machine (educational content) → FAQ → WhatsApp CTA.

Example FAQ prompts for Domestic Flour Mills: "Which flour mill is best for home use?", "What grains can be used?", "How much flour can it produce?", "How much power does it consume?", "How should it be maintained?" — this content pairing drives both SEO and AEO (AI answer-engine) visibility.

5. Individual Machine Pages

Every machine — current and future — receives its own dedicated, indexable URL. This is the most important structural decision in the plan.

#	Model	URL
1	Supreme	/products/supreme/
2	Supreme Plus	/products/supreme-plus/
3	Kerona	/products/kerona/
4	Kerona Plus	/products/kerona-plus/
5	Aura	/products/aura/
6	Aura Plus	/products/aura-plus/
7	Premium	/products/premium/
8	Premium Plus	/products/premium-plus/
9	Gelanto	/products/gelanto/

Reference point: the current Aura Plus page already documents variants (AP-1, AP-2) and features such as the stainless-steel cutter, air-cooled filter, automatic front door, copper-winding motor, digital control and automatic cleaning system — strong raw material to restructure into the template in Section 6.

6. Product Detail Page — Exact Template

This is the highest-converting page template on the entire site and should be built consistently across all machines.

Above the Fold

Left — Gallery

Main image, front, side, back, close-up, usage/lifestyle, packaging, and a short video.

Right — Buying Info

Product name + rating, short value proposition, capacity/model callout, Key Benefits checklist, primary CTA "Get Price on WhatsApp", secondary "Request a Callback".

Key Benefits (example)

✓ Automatic Cleaning ✓ Copper Winding Motor ✓ Digital Controls ✓ Auto Close Door ✓ Stainless Steel Components

Why You'll Love It

Benefit-led language rather than specs-only: Fresh Flour at Home, Easy Cleaning, Efficient Motor, Kitchen-Friendly Design.

Technical Specifications

Specification	Details
Model	e.g. AP-1
Capacity	e.g. 6.5 Kg
Motor	—
Power	—
Grinding Capacity	—
Dimensions	—
Weight	—
Warranty	—

Only publish specifications confirmed by Jagruti — never fill blanks with assumed values.

"Is This Right For You?"

Perfect for: families, daily home flour grinding, health-conscious households, users wanting fresh flour, modern kitchens. Followed by: "Not sure which model to choose? → Compare Jagruti Models → Ask an Expert on WhatsApp."

7. Product Comparison Page

URL: /compare/ — lets a visitor place 2–3 machines side by side, e.g. Aura vs. Aura Plus, Supreme vs. Supreme Plus.

Attribute	Aura	Aura Plus
Capacity	—	—
Motor	—	—
Cleaning	—	—
Controls	—	—
Design	—	—
Best For	—	—

Closing prompt: "Still confused? Tell us what you need and we'll recommend the right machine." → Talk to an Expert on WhatsApp. This single page replaces the need for a conventional checkout while still giving visitors a confident, e-commerce-grade buying experience.

8. About Jagruti

URL: /about/ — **Hero:** "Engineering Better Kitchen Solutions Since 1995."

**1995: Foundation → Manufacturing Growth → Product Expansion → Technology & Innovation →
Nationwide Reach → Today**

Followed by: Manufacturing (factory, machinery, production, assembly, quality control), Team & Leadership (with client approval), Mission / Vision / Quality / Manufacturing Capability, and a closing CTA: "Talk to Jagruti."

Jagruti's current material confirms 1995 as the founding year and describes ISO 9001:2015 certification and its Rajkot manufacturing operation — this should anchor the About page's trust narrative.

9. Why Jagruti

URL: /why-jagruti/ — a dedicated trust/conversion page, since the brand has many genuine USPs worth their own space rather than a homepage section alone.

30+ Years Experience • Quality Control • Manufacturing Capability • Product Range • Technology • Indian Kitchen Expertise • Customer Service • OEM / Custom Manufacturing • Nationwide Reach.

Use strong photography and product visuals rather than large blocks of text. Close with: "Looking for the right machine? Talk to Our Team → WhatsApp."

10. Manufacturing Page

URL: /manufacturing/ — recommended because Jagruti is a manufacturer, not a reseller, which strengthens trust for commercial and B2B search intent.

Hero: "Where Quality Meets Engineering." Sections: Our Facility, Manufacturing Process, Quality Control, Technology, Testing, Packaging & Dispatch, Custom Manufacturing, OEM Solutions.

Jagruti's existing catalogue material describes growth to a 15,000 sq. ft. manufacturing area and custom-made / OEM supply capability — valuable, specific trust content for this page.

11. Support & Service

URL: /support/ — **Hero:** "We're Here After Your Purchase."

Sub-page	URL	Purpose
Warranty	/warranty/	Explain warranty coverage clearly
Service & Repairs	/service/	Request service assistance
Spare Parts	/spare-parts/	Replacement part information
Maintenance	—	How to maintain the machine

CTA: "Talk to Support on WhatsApp."

12. Blog & Content Strategy

URL: /blog/ — the existing site already has blog content targeting atta chakki / flour mill search terms; the new blog turns this into a deliberate SEO content engine that funnels directly into product pages.

Category	Example Articles
Buying Guides	Best flour mill for home, how to choose an atta chakki, domestic vs. commercial flour mill, best atta chakki for Indian families
Product Guides	Aura vs. Aura Plus, Supreme vs. Supreme Plus, how to choose the right Jagruti flour mill
How-To	How to clean a flour mill, how to maintain an atta chakki, which grains can be ground at home
Food & Health	Benefits of freshly ground flour, types of grains you can grind at home, why fresh flour matters
Commercial	How to choose a commercial flour mill, flour mills for small businesses, capacity guide

Blog → Product Conversion Path

Article: "Best Flour Mill for Home — Complete Buying Guide" → Recommended Jagruti Models (Aura, Aura Plus, Supreme) → Compare Models → Get Price on WhatsApp

Every article should end by pointing at specific products — blogs exist to generate enquiries, not just traffic.

13. FAQ Page

URL: /faq/ — organised by category: Products, Buying, Flour Mills, Commercial Machines, Service, Warranty, Delivery, WhatsApp Ordering. Every answer should be written clearly enough for Google and AI systems to extract and quote directly — this is one of the most effective pages for AEO (answer-engine optimisation).

14. Contact Page

URL: /contact/ — **Hero:** "Let's Find the Right Machine for You."

Channel	Detail
Registered Address	Iscon Industrial Area, Plot No. 13–14, Lodhika Road, Ravki, Rajkot, Gujarat – 360004, India
Customer Care	+91 7070705922
Trade Inquiry	+91 9512305922
Email	cc@jagrutiappliances.com / info@jagrutiappliances.com

Contact form fields: Name, Phone, Email, Interested Product, Enquiry Type, Message — CTA "Send Enquiry." Include a prominent WhatsApp panel ("Chat With Jagruti") and a Google Maps embed with the full address.

15. Legal Pages

Lightweight but required pages: Privacy Policy, Terms & Conditions, Shipping & Delivery Information, and Cancellation / Refund Policy (relevant even without online payment, for order/enquiry-related terms).

16. Global Website Features

Header

Logo | Products | Solutions | Why Jagruti | About | Resources | Support | Contact — with Search and a persistent WhatsApp button on the right; a hamburger menu + WhatsApp button on mobile.

Products Dropdown

Domestic Flour Mills, Commercial Flour Mills, Food Processing Machinery, Pulverizers, Roti Makers, "View All Products →"

Resources Dropdown

Blog, Buying Guides, FAQ, Catalogue

Mobile Experience

Bottom sticky bar present site-wide: 📞 **Call** | **WhatsApp**. On product pages specifically, "Get Price on WhatsApp" stays accessible while scrolling — mobile conversion is treated as a first-class design requirement, not an afterthought.

17. WhatsApp Conversion System

Every "WhatsApp" button opens a chat with a pre-filled, context-specific message — never a blank, generic chat window. This is treated as a designed system, not a single link.

Button	Pre-filled Message
Get Price	<i>"Hi Jagruti Appliances, I'm interested in the [Product Name]. I'd like to know the current price, availability, warranty and delivery details."</i>
Product Enquiry	<i>"I'd like more information about the [Product]."</i>
Dealer Enquiry	<i>"I'm interested in becoming a dealer/distributor for Jagruti Appliances."</i>
Service	<i>"I need service support for my Jagruti [Product]."</i>

Additional CTA variants used contextually: Ask About This Product, Check Availability, Request Price, Talk to an Expert — each opening WhatsApp with its own pre-filled text. This makes the website behave like a real sales funnel rather than a static brochure.

18. SEO & AEO Architecture

Keyword Clusters

Cluster	Example Terms
Brand	Jagruti Appliances, Jagruti flour mill, Jagruti atta chakki
Domestic	atta chakki, domestic atta chakki, flour mill for home, best atta chakki for home
Commercial	commercial flour mill, commercial atta chakki, flour mill machine
Industrial	pulverizer machine, food processing machinery, food processing machine manufacturer
Per-Product	e.g. Jagruti Aura Plus, Aura Plus flour mill, Aura Plus atta chakki, Jagruti Aura Plus price

SEO Template — Applied to Every Product Page

Element	Example
SEO Title	Jagruti Aura Plus Flour Mill 6.5 Kg Atta Chakki
Meta Description	Product-specific, benefit-focused
H1	Jagruti Aura Plus Flour Mill
URL	/products/aura-plus/
Structured Data	Product schema, Breadcrumb schema, FAQ schema (only where the page genuinely has matching FAQs), Organization schema, LocalBusiness markup where appropriate

Image SEO

File names and alt text should be descriptive rather than generic camera filenames — e.g. `jagruti-aura-plus-flour-mill.jpg` with alt text "Jagruti Aura Plus domestic flour mill" or, for a feature shot, "Jagruti Aura Plus flour mill automatic cleaning system."

Internal Linking

Blog → Category Page → Product → Related Product → Compare → WhatsApp

Linking is designed deliberately to build topical clusters, not left to chance — every category page should also link to its "Not sure which model to choose?" comparison prompt.

AEO / AI Search Structure

Key pages should answer likely questions directly and concisely (2–4 sentences), for example: "What is the best flour mill for home use?", "Which grains can Jagruti flour mills grind?", "What is the difference between Aura and Aura Plus?", and "How do I buy a Jagruti flour mill?" — with the last answered plainly: *"Customers can enquire about Jagruti products through WhatsApp or contact the sales team for current pricing, availability and delivery information."* This gives both search engines and AI assistants clean, quotable answers.

19. Conversion Tracking

Since there is no online checkout, "purchase" is not the trackable event — the funnel below is, via Google Analytics and Search Console:

**Product View → Compare Click → WhatsApp Click → Phone Click → Enquiry Form → Catalogue
Download → Contact**

"Product View → WhatsApp Click" should be treated as the single most important conversion metric on the site.

20. Build Priority — Phased Roadmap

Phase 1 — Conversion Foundation

Home • Products • Product Category Pages • Individual Product Pages • WhatsApp Conversion System • Contact

Phase 2 — Trust

About • Why Jagruti • Manufacturing • Support • Warranty • FAQ

Phase 3 — SEO Growth

Blog • Buying Guides • Product Comparison • SEO Landing Pages • Internal Linking • Structured Data / Schema

Home, Products, category pages, individual product pages, the WhatsApp system and Contact determine most of the site's perceived quality — these should be built and polished first.

21. Final Page Count

For the full premium SEO + conversion-optimised website, assuming the nine existing domestic flour-mill models are the individual machines given separate pages, the plan totals **31 core pages** plus legal pages.

#	Page	URL
1	Home	/
2	All Products	/products/
3	Domestic Flour Mills	/domestic-flour-mill/
4	Commercial Flour Mills	/commercial-flour-mill/
5	Food Processing Machinery	/food-processing-machinery/
6	Pulverizer Machines	/pulverizer/
7	Roti Maker Machines	/roti-maker-machine/
8–16	Nine individual product pages (Supreme → Gelanto)	/products/[model]/
17	Compare Products	/compare/
18	About Jagruti	/about/
19	Why Jagruti	/why-jagruti/
20	Manufacturing	/manufacturing/
21	Support	/support/
22	Warranty	/warranty/
23	Service & Repairs	/service/
24	Spare Parts	/spare-parts/
25	FAQ	/faq/
26	Blog	/blog/
27	Buying Guides	/blog/buying-guides/
28	Food & Health	/blog/food-health/
29	Product Guides	/blog/product-guides/
30	Contact	/contact/
31	Catalogue / Download	/catalogue/

Plus legal pages (lightweight): Privacy Policy, Terms & Conditions, Shipping & Delivery, Cancellation / Refund Policy — bringing the complete static site to **35 pages**.

Launch-ready total 35 static/core pages + 9 product pages (already counted above, restated for clarity) + 10–15 SEO blog articles ≈ **45–50 indexed URLs at launch**. Blog articles are not part of the 35-page core count and should keep growing after launch. Each additional commercial or food-processing machine identified beyond the current range adds exactly one more product page.

22. Recommended User Journey

Discovery Journey

Google / Instagram / YouTube → Home → Product Category → Product List → Product Detail →
Compare / Understand → "Get Price" → WhatsApp → Sales Team → Purchase

Search-Led Journey

Google Search → SEO Landing / Blog Page → Product → FAQ / Specifications → WhatsApp

Every product page needs to be independently indexable and SEO-optimised, because a large share of visitors will land directly on a product or category page from search rather than starting at the homepage.

23. Visual & Design Direction

Positioning: a **premium Indian appliance brand** — somewhere between modern D2C e-commerce and established manufacturing credibility. The goal is for a visitor to think "I can trust this brand and I want to enquire about this machine," not "this is an industrial machinery catalogue."

Palette

Sky Blue + White + very light neutral backgrounds

Visual Language

Large product photography, generous whitespace, rounded product cards, smooth hover animations, sticky WhatsApp CTA, specification "chips," subtle scroll animations, large typography, high-quality product video, clean iconography, considered micro-interactions.
